

The Pollution Challenge

Walking to keep our planet pollution free!

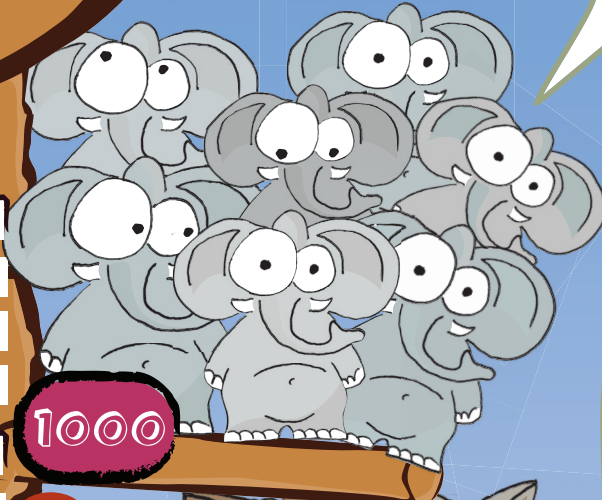

1200 balloons!

Wow! My brother and I are really pleased to see so many of you have been walking to school! By not coming in the car, you've saved our weight in pollution and helped make the air around our homes and yours much cleaner.

1000 balloons!

You must have walked really far to have saved our weight in pollution. Even though we are only baby elephants, the seven of us still weigh a lot!

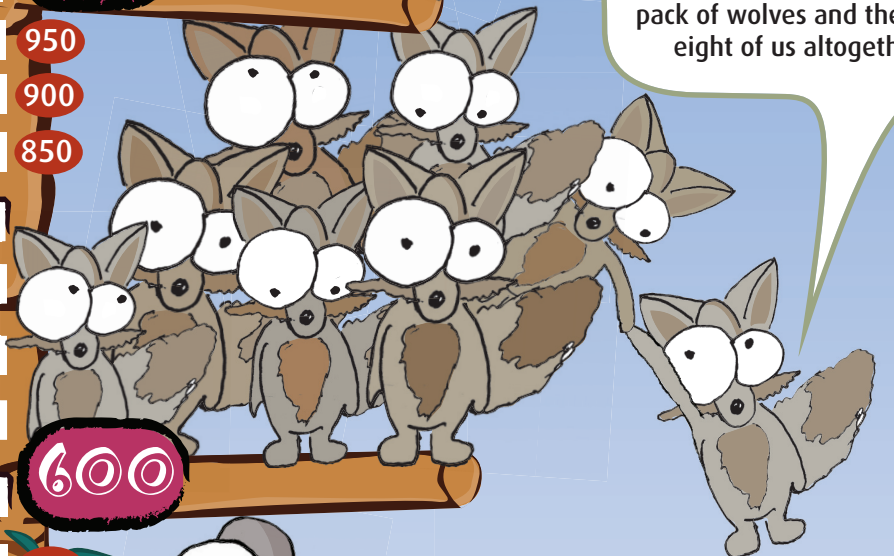

800 balloons!

Brilliant! You've saved the same as my weight in pollution and because I carry a lot of water in my hump, I am very, very heavy.

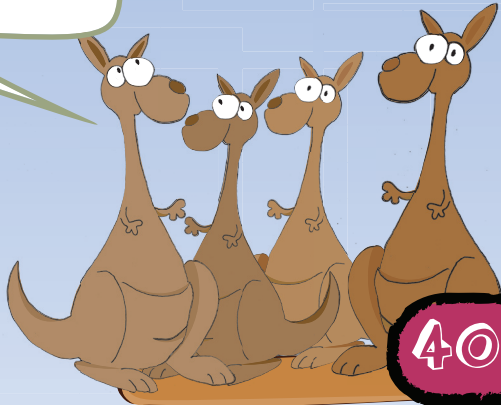

600 balloons!

Amazing! With so many of you walking you've saved the same weight in pollution as my whole pack of wolves and there are eight of us altogether!

400 balloons!

You've done really well! You've saved the same weight in pollution as the four of us weigh! You're really helping to save our planet!

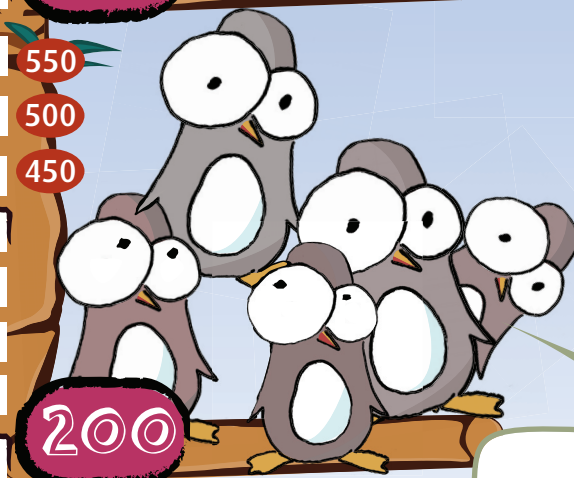

Remember!

Every little bit helps to keep our planet pollution free. Will your school save as much pollution as five Emperor Penguins, four Kangaroos or even seven baby Elephants? Have fun!

200 balloons!

Well done! Did you know by walking you've saved as much pollution as five Emperor penguins weigh!

School Totals!

Ride it, walk it, don't just talk it!
